

Robbie Robot Shop

Andrew Ridout

The Robbie Robot Shop is an interactive interface where you can perform a number of operations that involve robots. The shop was created to give customers as many options as possible when it came to purchasing a robot. The Robbie Robot Shop, or RRS, is easy to use and navigate for a beginner user yet still sophisticated and robust enough for even the most advanced users. Let's take an in-depth look at the features available with RRS.

Whenever you start up the system, you will be greeted with a user-friendly menu window. From "File", we can choose "Quit" if we wish to exit the program. Next to "File" we can find "Robot Parts"; from this menu the user is able to create single individually customizable robot parts. These include, Torsos, Heads, Arms, Locomotors, and Batteries" Next we will see "Robot Models"; from here we are able to choose from a predetermined bundle of robot parts that come together as a single, ready-to-use, assembled robot. There are three options, we have models 9000, 5000, and 2500. The 9000 model is great for advanced users, the 5000 is good for the intermediate robot owner, and the 2500 is perfect for a first-time owner.

Let's take a look at the "Customer" drop-down menu. From here we can create a new customer complete with name and all other relevant information. Next to "Customer" is "Sales Associate"; from this menu we can create a new sales associate however this option is usually reserved for shop staff. Second to last, we will look at "Orders"; from here we can create a new order or view all orders. The "View All Orders" option is similar to a shopping cart on popular websites such as Amazon.com. And lastly, there is the "Help" menu which has a bit of information about how to navigate through the system for maximum ease-of-use.

Thank you for choose the Robbie Robot Shop for all of your robot shopping needs.
